

WeVo Pay

Bridge Egyptian Wallets to InstaPay

A secure P2P escrow-style transfer platform built with ASP.NET Core MVC

Project Presentation

The Problem

Why WeVo Pay exists

1

Wallet locked

Vodafone Cash & local wallets cannot send money straight to InstaPay.

2

User friction

People need a trusted middle path with clear status tracking.

3

No transparency

Without a system, cash-outs are manual, risky, and hard to audit.

Our Solution

Escrow-style bridge

- 1 User creates a transfer request
- 2 Pays the company wallet (e.g. Vodafone Cash)
- 3 Admin verifies the payment
- 4 Admin completes payout to InstaPay

Business Value

01

Solves a real gap

Wallet → InstaPay that apps cannot do natively

02

Fee revenue

Configurable % fee on every completed bridge transfer

03

Trust & control

Admin verification + 1-hour pending timeout

04

Growth loop

Referral links on registration

Who Uses WeVo Pay?

User

Create transfers

Track status + timer

Messages & rates

Profile & settings

Admin

Verify payments

Complete / reject

Manage wallets

Set fees & reply chat

System

Auto-cancel 1h

Hash passwords

Seed admin

Cache live rates

Transfer Lifecycle

Fee = Amount x Fee% | Total to send = Amount + Fee | Fee% from System Settings

Pending without admin verification for 1 hour becomes Cancelled automatically.

Technical Stack

Backend ASP.NET Core MVC (.NET 10)

ORM / DB EF Core + SQL Server

Auth Cookie auth + Roles

UI Razor + Bootstrap + custom CSS

Jobs IHostedService auto-cancel

APIs Live FX + Gold (cached)

Architecture Layers

Views (Razor)

Login, Dashboard, Transfers, Admin, Messages, Rates

Controllers

HTTP, Authorize, ModelState, redirect / View()

Services

Business rules: fee, verify, complete, expire, chat

Data (EF + SQL)

Users, Wallets, TransferRequests, Transactions, Messages

Feature Highlights

Transfers

Create, track, details timeline

1h Timer

Auto-cancel pending requests

Admin Ops

Verify / Complete / Reject

Messages

User ↔ Admin support chat

Rates

Arab FX + gold in EGP

Referrals

Grow with invite links

Security & Trust

Passwords hashed (never plain text)

Cookie authentication + role checks

Anti-forgery tokens on POST forms

Users only access their own transfers

Admin actions are role-gated

Pending requests expire in 1 hour

Live Demo Path

1

Admin login

admin / Admin@123 → Dashboard

2

User transfer

Create request → see fee + 1h timer

3

Verify & complete

Admin confirms payment → InstaPay done
